

# 11 Tray Microgreen & Propagation System

American Hydroponics

# 11 Tray Microgreen & Propagation System

Consistent seedling production is crucial when you have to supply your clients regularly. The **11 Tray Propagation System** is designed for a grower to have consistent trouble-free seedling production. The propagation trays hold 2 standard 10"x20" sheets of Oasis, Rockwool or matting for microgreens, giving the system a total of 3,564 seedling sites, or 30 square feet of space for microgreens. Each tray can be removed quickly and easily from the table to transport the seedlings to your planting area. After the seedlings are transplanted, the tray is cleaned, reseeded and put back into the system. The system is flexible, allowing you to easily ramp up or down depending on your needs.

## Features:

- \* (1) 4'x12' Freestanding galvanized steel table frame and all hardware
- \* (11) 13"x45" White propagation trays with fittings
- \* (1) Manifold complete with grommets, micro tubes, clean out, ball valve, and drain bypass
- \* (1) Collector with drain
- \* (1) Submersible pump
