

IntelliDose™ ... the Smart Hydroponic Doser

With PC software and an Internet connection, you can remotely access your grow room from anywhere. Check and adjust your nutrient and pH levels, dump your reservoir ... especially handy for multiple grow rooms.

Optimum plant performance begins at the root zone.

- Minimize crop loss created by dosing-by-hand fluctuations. Plants thrive in a stable nutrient solution with consistent TDS (EC) and pH.
- User friendly. Controls your nutrient and pH levels *on demand ... automatically ... all the time.*
- Provides PC data log to monitor TDS, pH and reservoir temperatures. Learn to anticipate feeding variables and correct them before they happen.

IntelliDose

Automated nutrient control for optimum crop performance ...

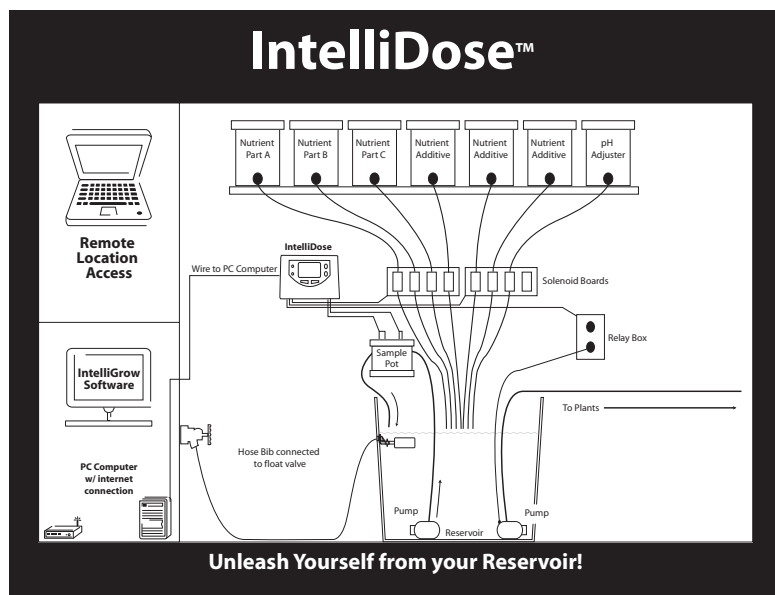

Quality nutrients and amendments are only effective in relation to how well they are balanced with water in your nutrient solution.

The problems with hand dosing your nutrient solution:

- Hand dosing requires a lot of time, time you could be spending caring for your plants
- Hand dosing is hit or miss; fluctuating pH and EC swings throw nutrients out of balance. Plants need consistency to produce consistent results.

Growers who are using the IntelliDose report:

- Increased speed of growth, quality and yield with less labor
- Balanced nutrient/pH levels, reduce stress, reduced pests and disease
- Able to control multiple grow rooms from a remote PC
- More time to focus on plant care, marketing and fun

How the IntelliDose works:

Automatically doses simple (2 part) or complex (7 part) nutrients and amendments to your exact pH and PPM/EC/CF set points.

Program desired set points, fill stock tanks with nutrients and additives, and let the controller do the rest. The IntelliDose constantly monitors your nutrient and pH levels, adding nutrients and pH adjuster only when they are needed. PC software lets you program an entire crop cycle in minutes.
